The minutera is a beautiful fusion of camera and darkroom in one compact box. Traditionally used by street photographers around the world, it allows you to shoot, develop, and produce contact prints right inside the camera. It's both a piece of history and a hands-on way to experience analog photography.

This is a complete system for building a street box camera (lambe-lambe, minutera, Afghan box).

The 3D-printable set is **modular**. That means you can build the camera **fully** (box, base, chemical containers and tripod excluded), or just print specific assemblies, depending on your needs.

- Designed for **9x12 negatives/positives**, perfect for cutting down 18x24 X-ray film sheets.
- Works for both **portrait and landscape** formats.
- Uses a **magnetic attachment system** for easy switching between frame sizes.

- Currently supports 9x12, with **frame disks for 10x15 and 6x9** coming soon.

The camera is optimized for **contact prints** right inside the box, making it a true homage to the original Bernardi-style lambe-lambe cameras.

This release is just the beginning. I'll be adding:

- **New Free files** for some smaller accessories.
- Optional **electronic add-ons** (including Lambe Lab's little cuckoo bird surprise , to make the system even more fun).
- More frame disk sizes and upgrades free of charge.

If you purchase the model, I also offer a custom lens frame and lens cover files with your desired hole and lens diameter at no additional cost. For a complete hardware list with links, just send me a message at
